

The main screen brings together student strength, placement activity, intake and salary indicators.
Use the program filter and reporting-period notes when comparing views.

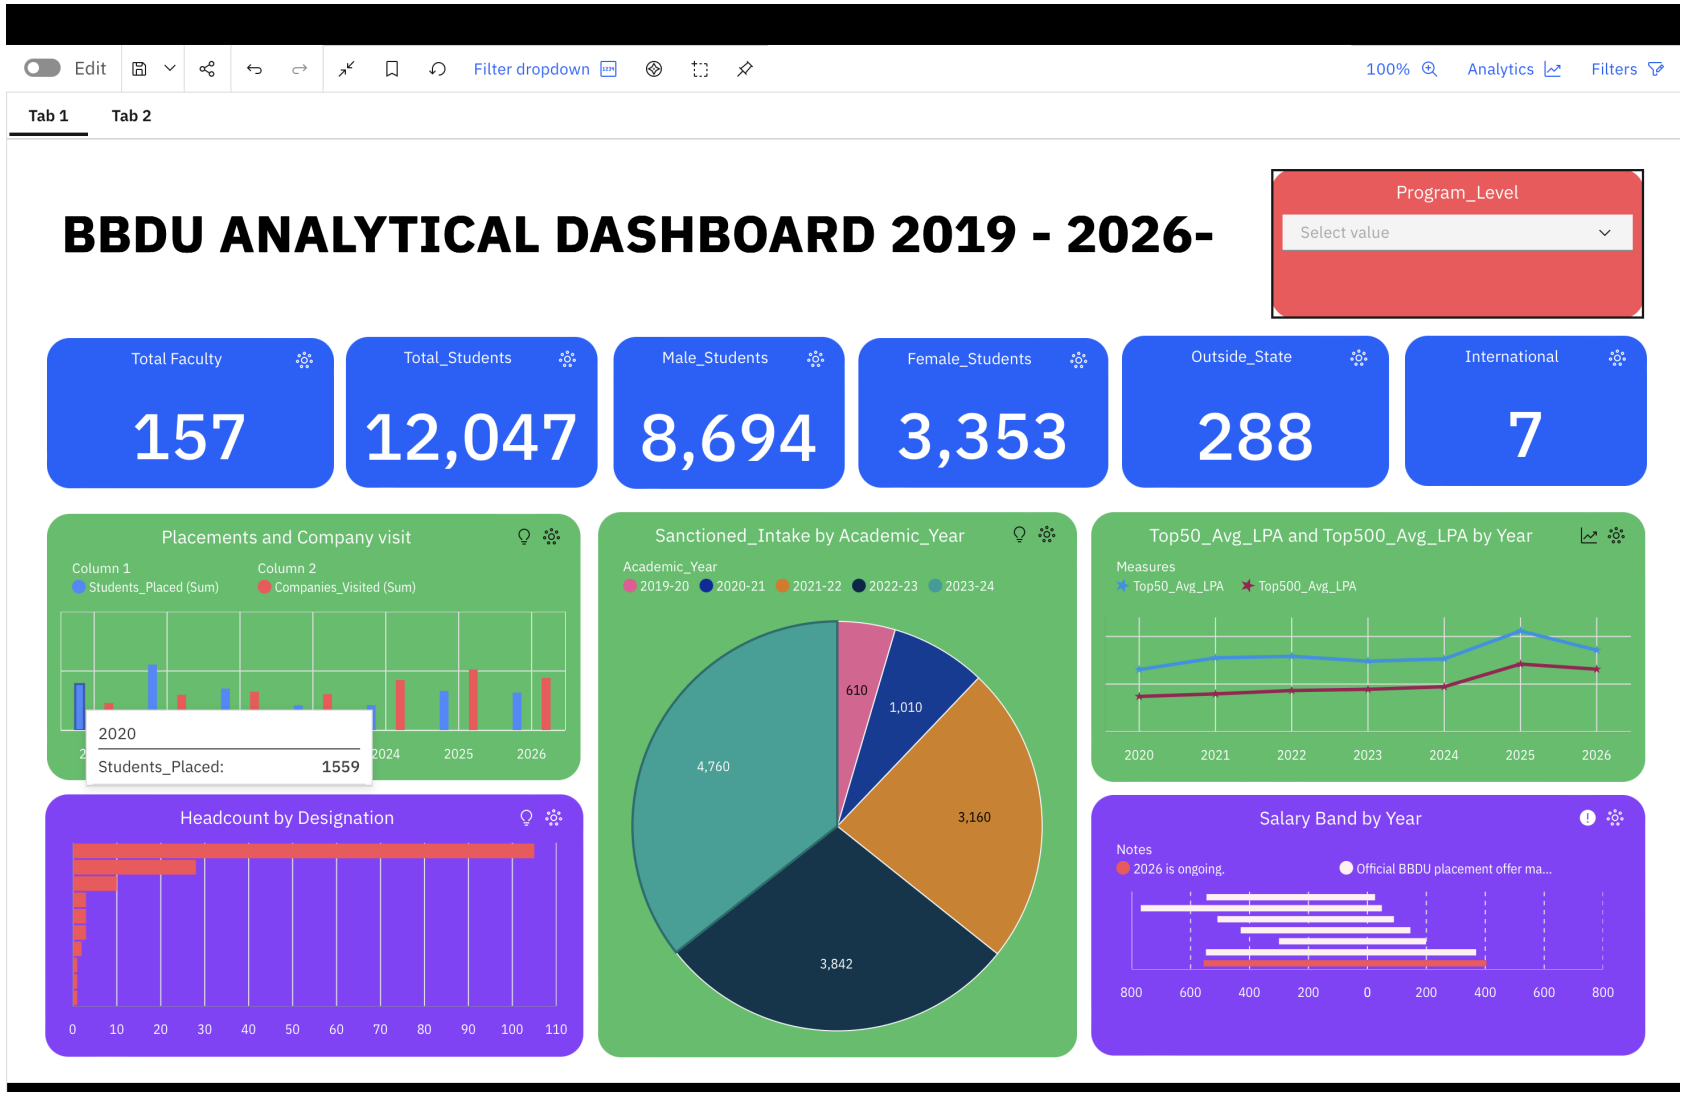

The UG filter displays 10,191 students across the undergraduate population.
This is a filtered snapshot, not a separate count to add to the university total.

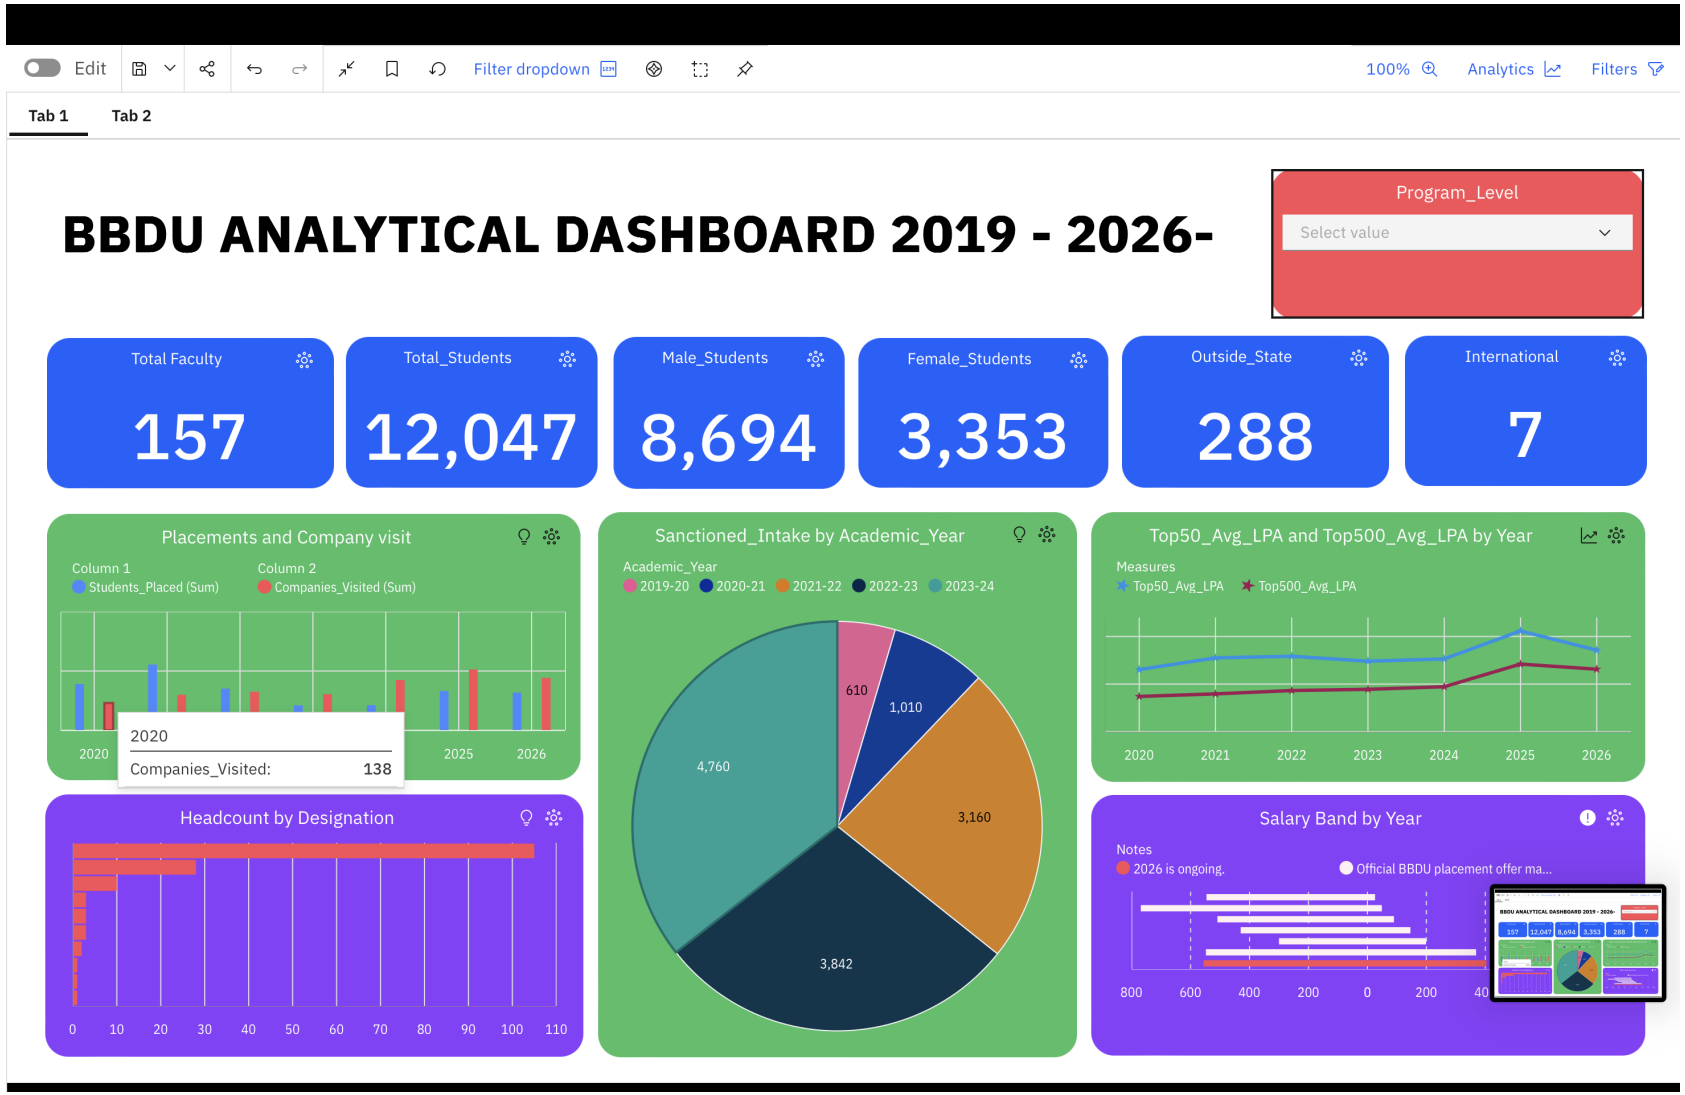

The PG filter displays 1,481 students in the postgraduate population.
Compare it with other filters only when the population and reporting basis match.

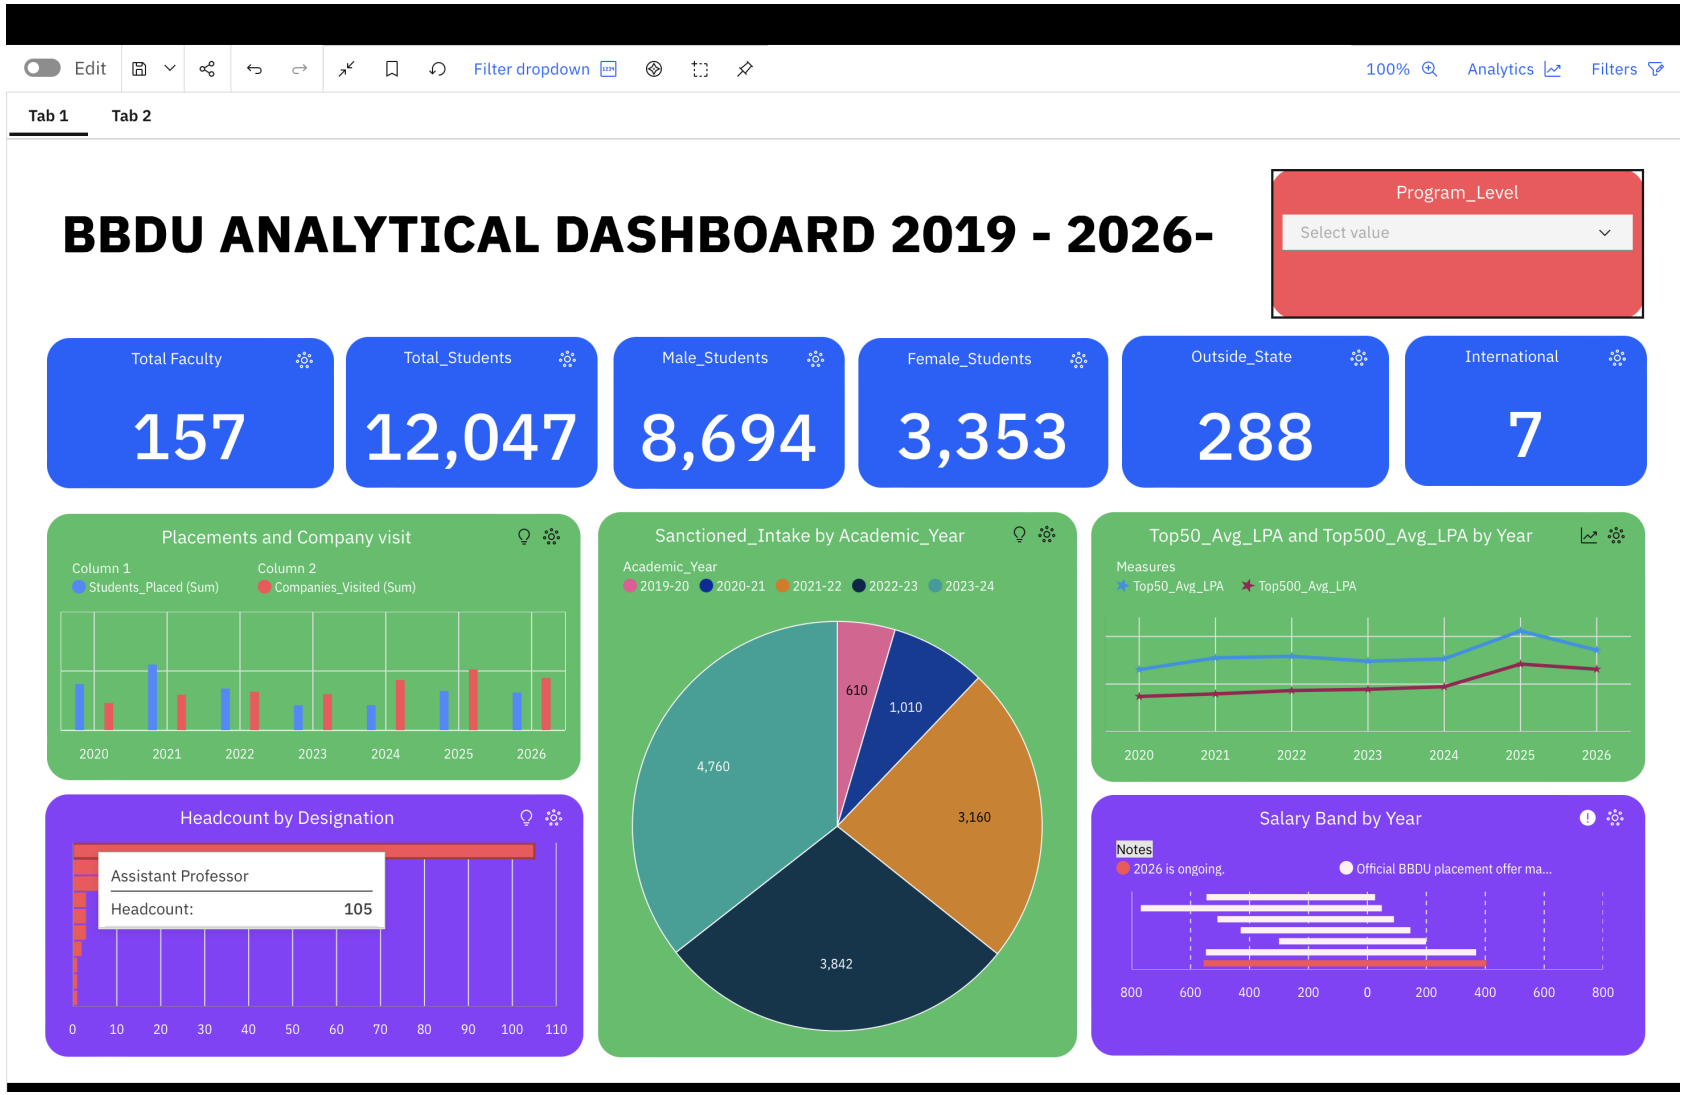

The PG-Integrated filter displays 375 students in this dashboard view.
Filtering makes a broad institutional snapshot easier to explore by program level.

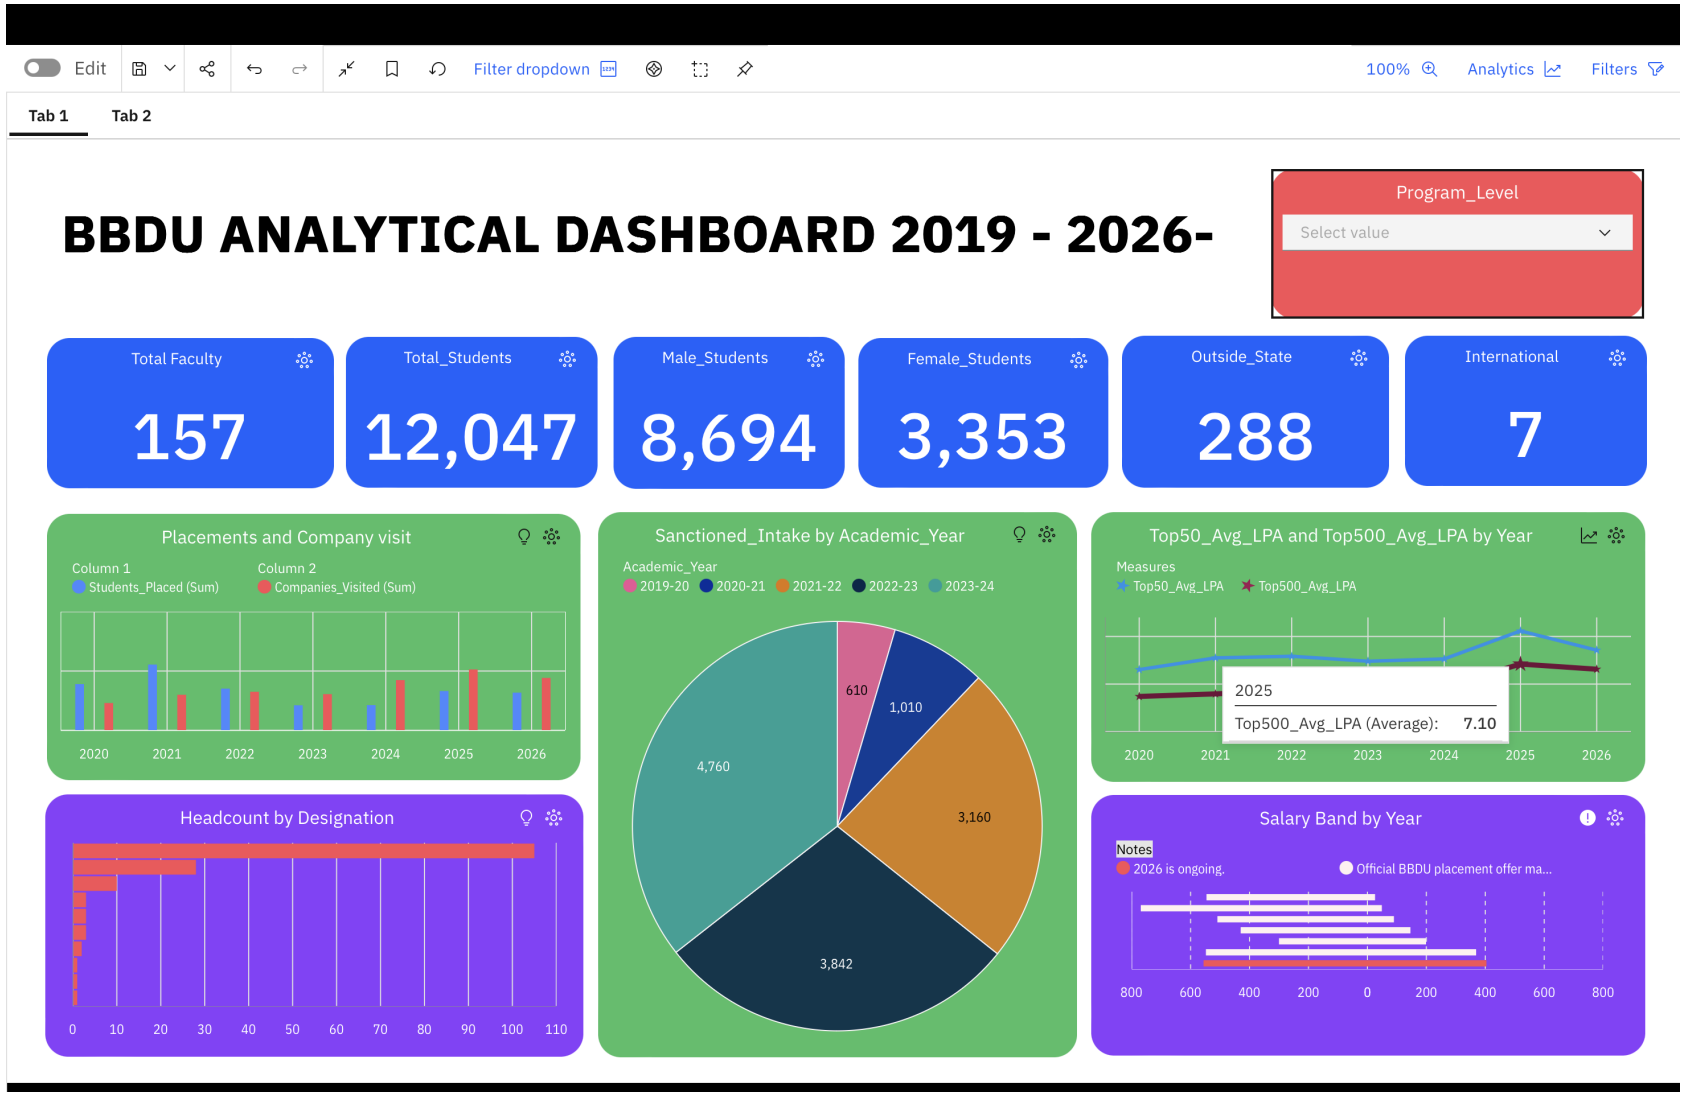

The dashboard tooltip reports 1,559 students placed in 2020.
Read this annual activity point alongside the chart's separate recruiter-visit series.

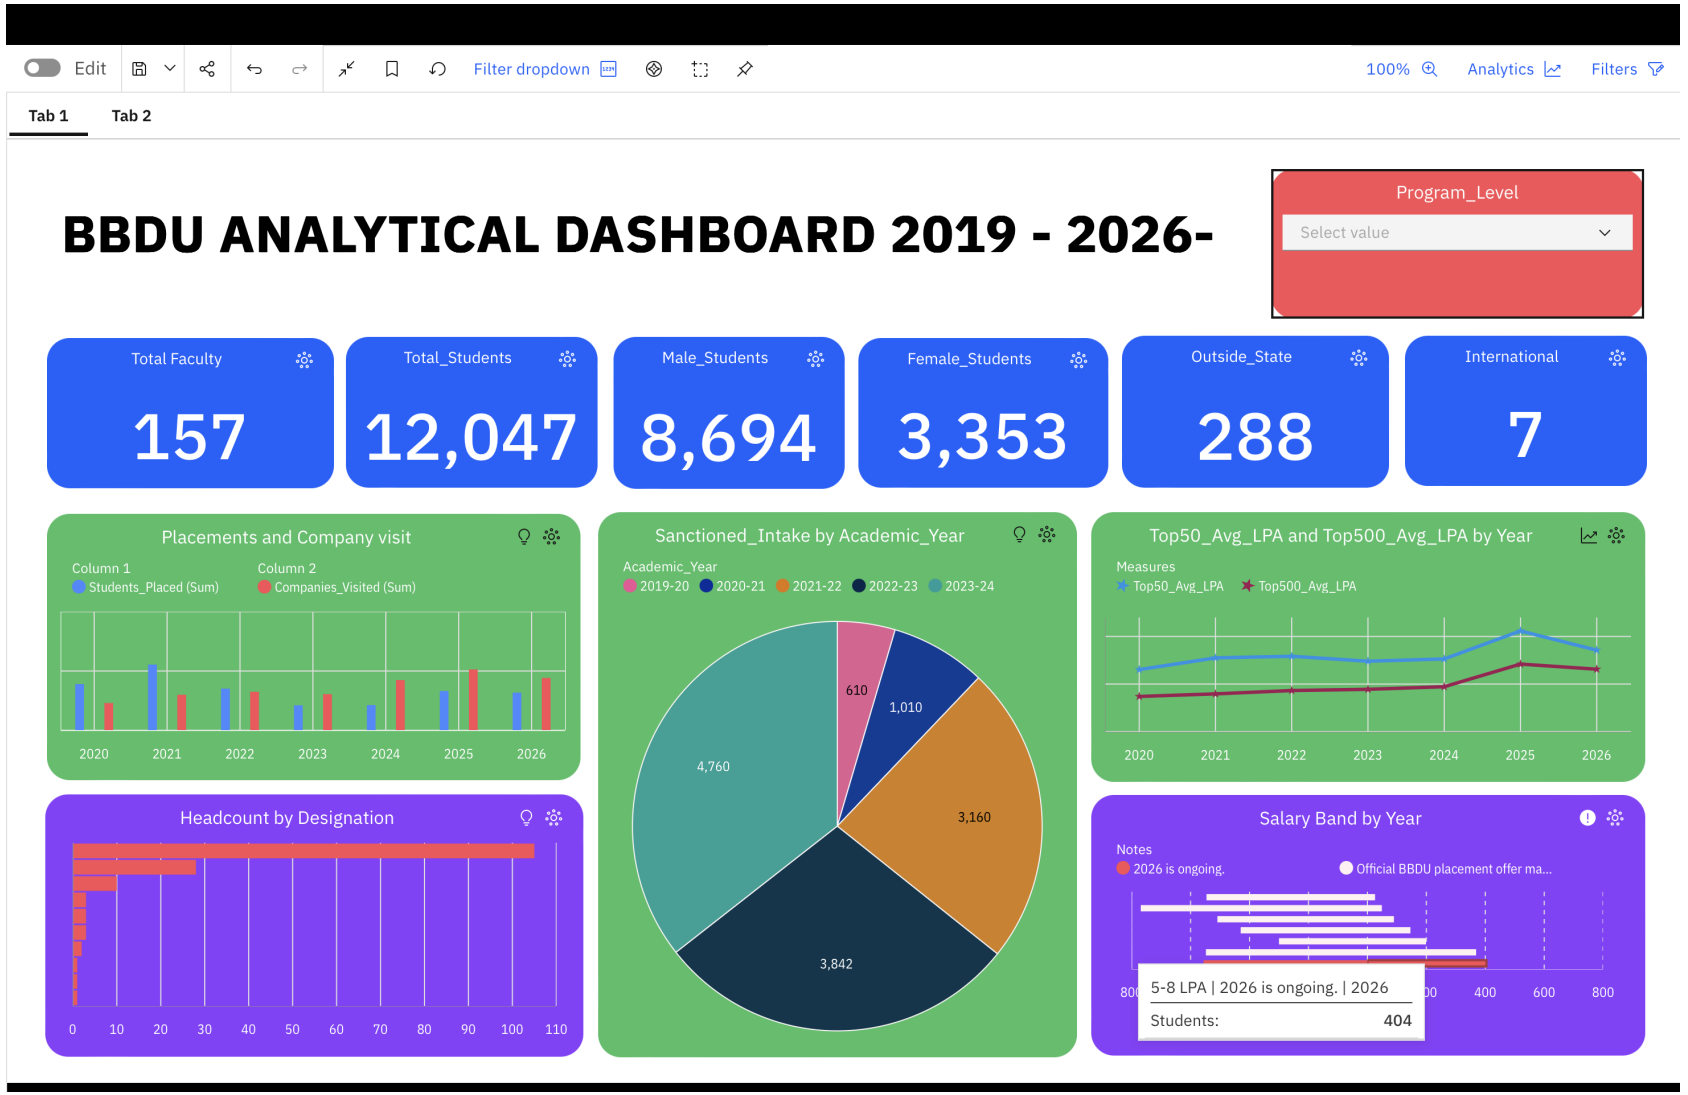

The dashboard tooltip reports 138 companies visited in 2020.
This is an activity measure; by itself, it does not explain placement outcomes.

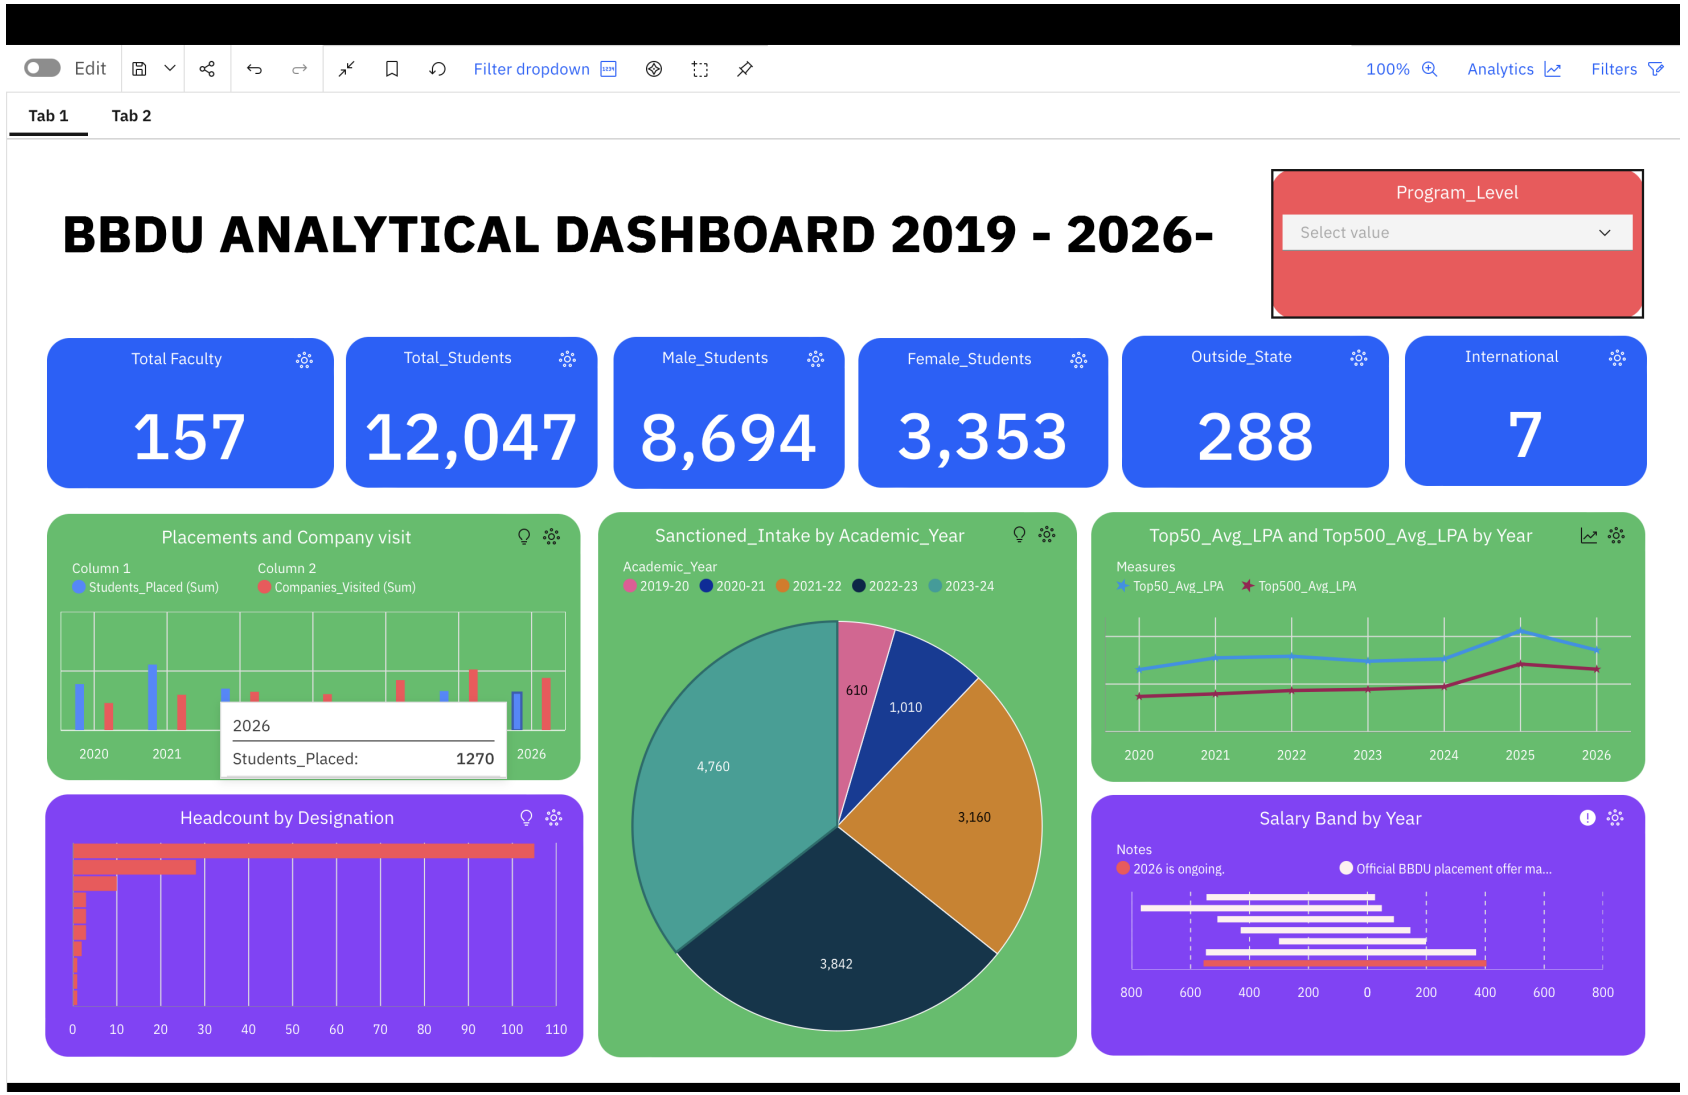

The dashboard highlights 105 Assistant Professors within its faculty view.
Treat this as a dashboard-reported count; the workbook roster is only a partial extract.

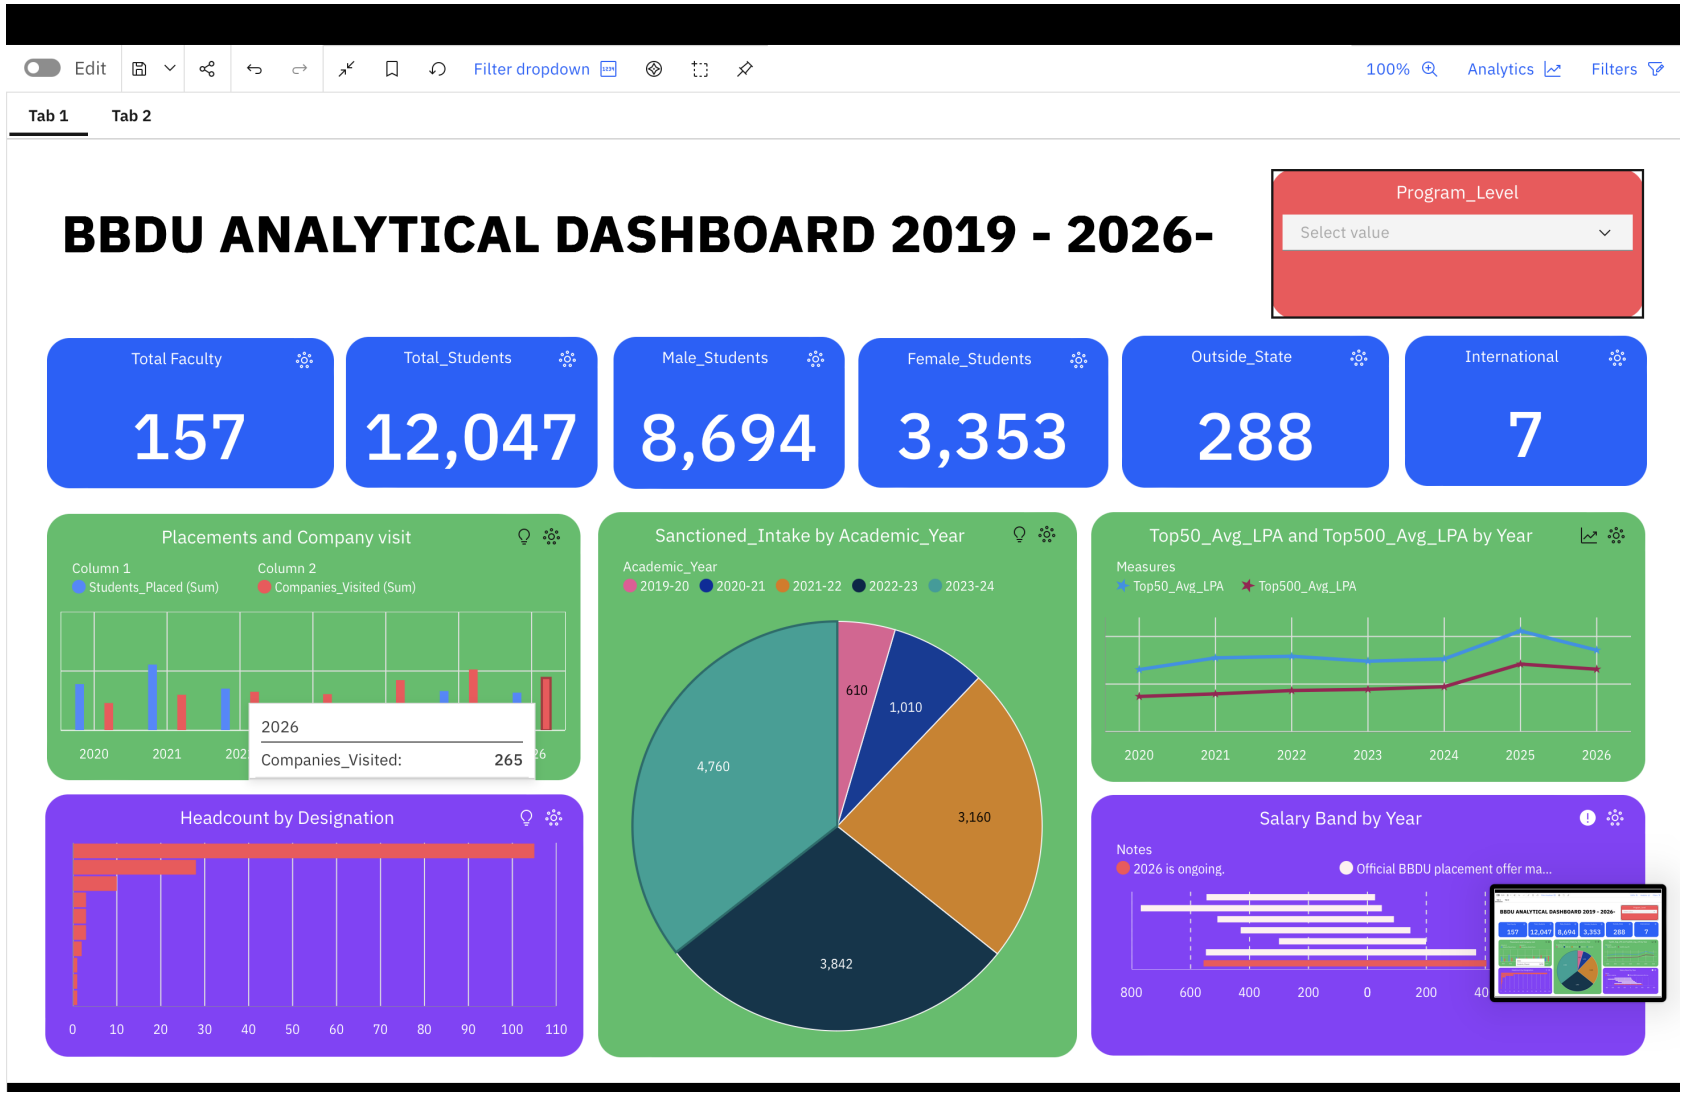

The tooltip shows 7.10 LPA for Top500_Avg_LPA in 2025.
This dashboard value is distinct from the workbook's reported median salaries.

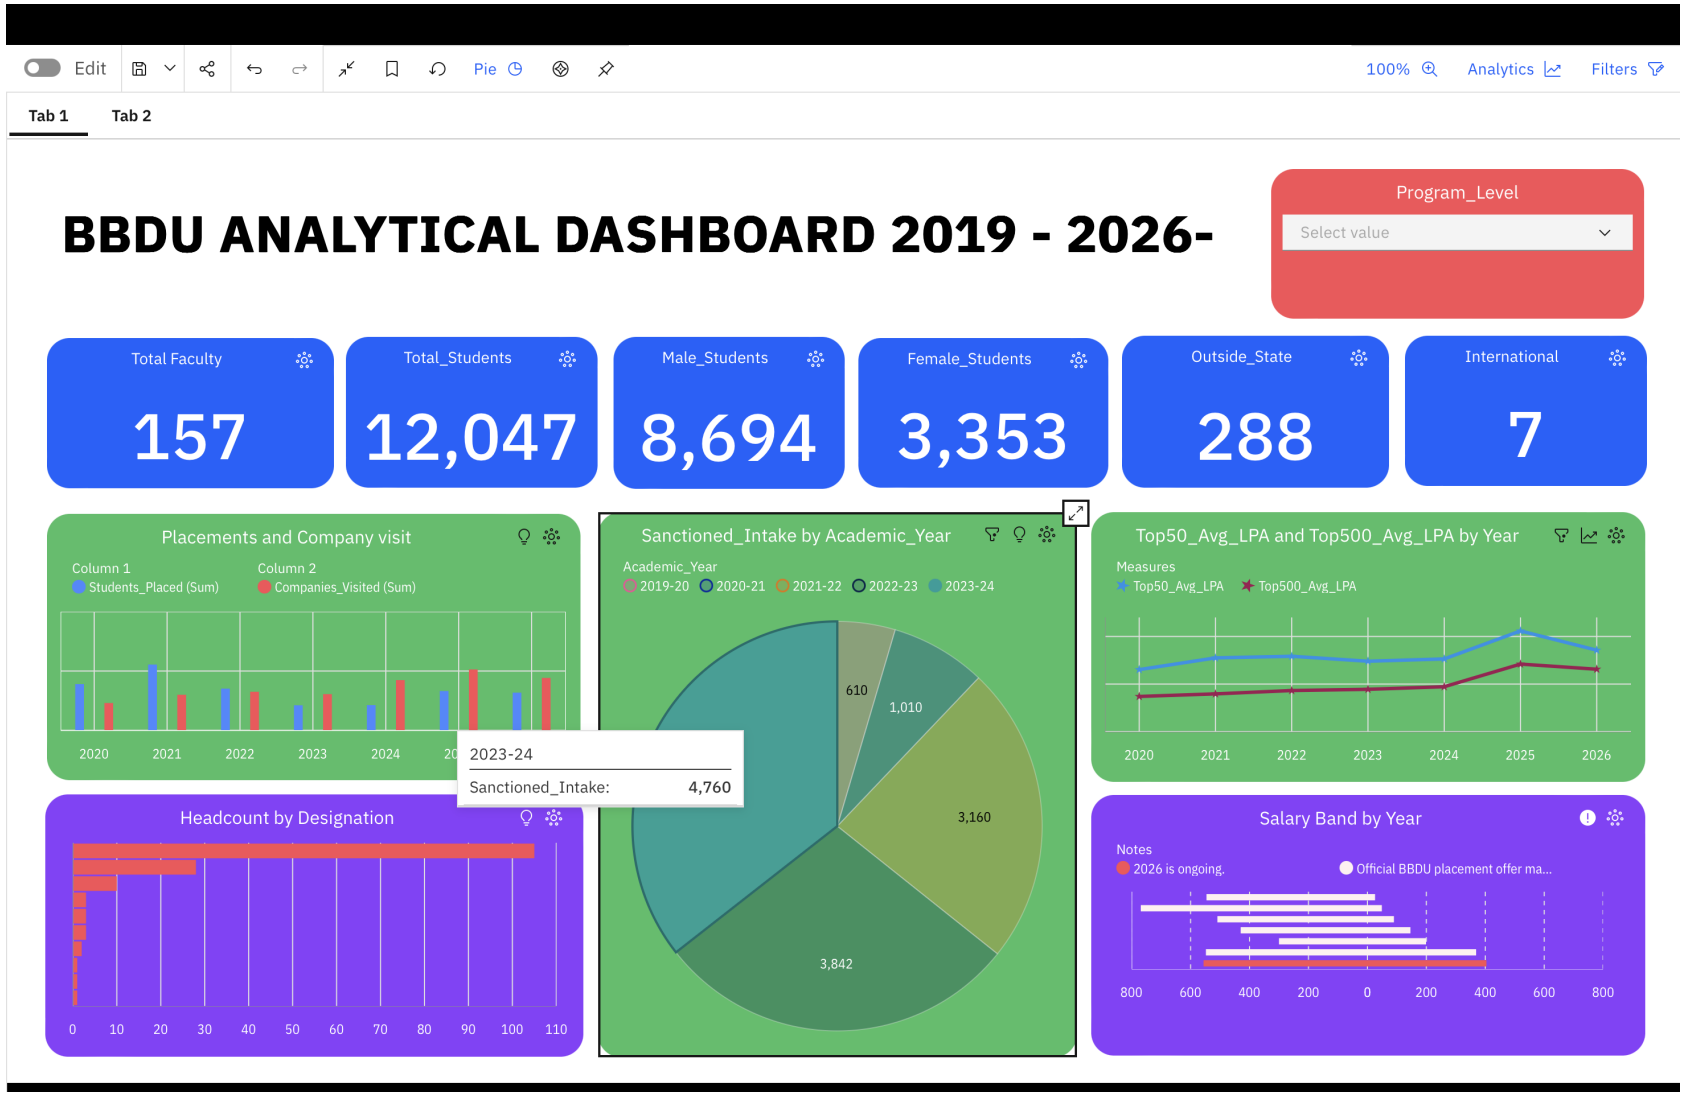

A tooltip reports 404 students in the 5–8 LPA band for 2026.
The dashboard marks 2026 as ongoing, so this is a partial-year view.

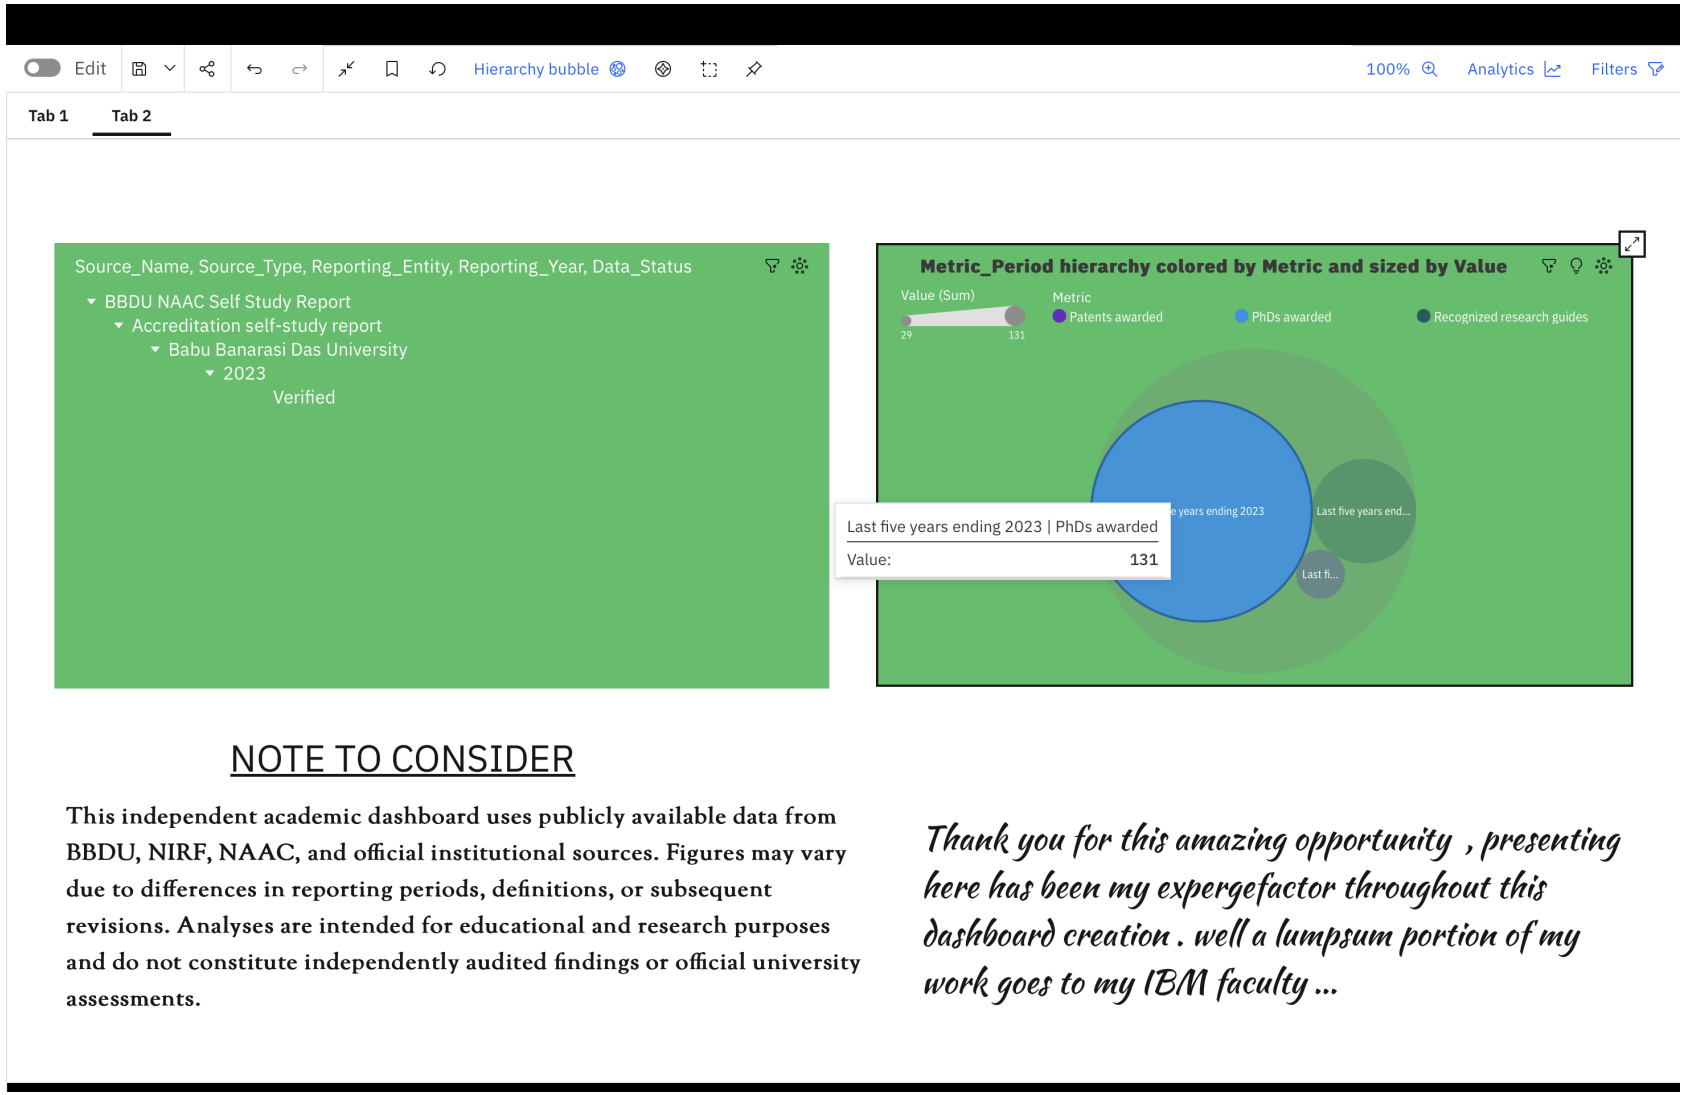

The dashboard tooltip reports 1,270 students placed in 2026.
Because 2026 is ongoing, this count is not directly comparable with a completed year.

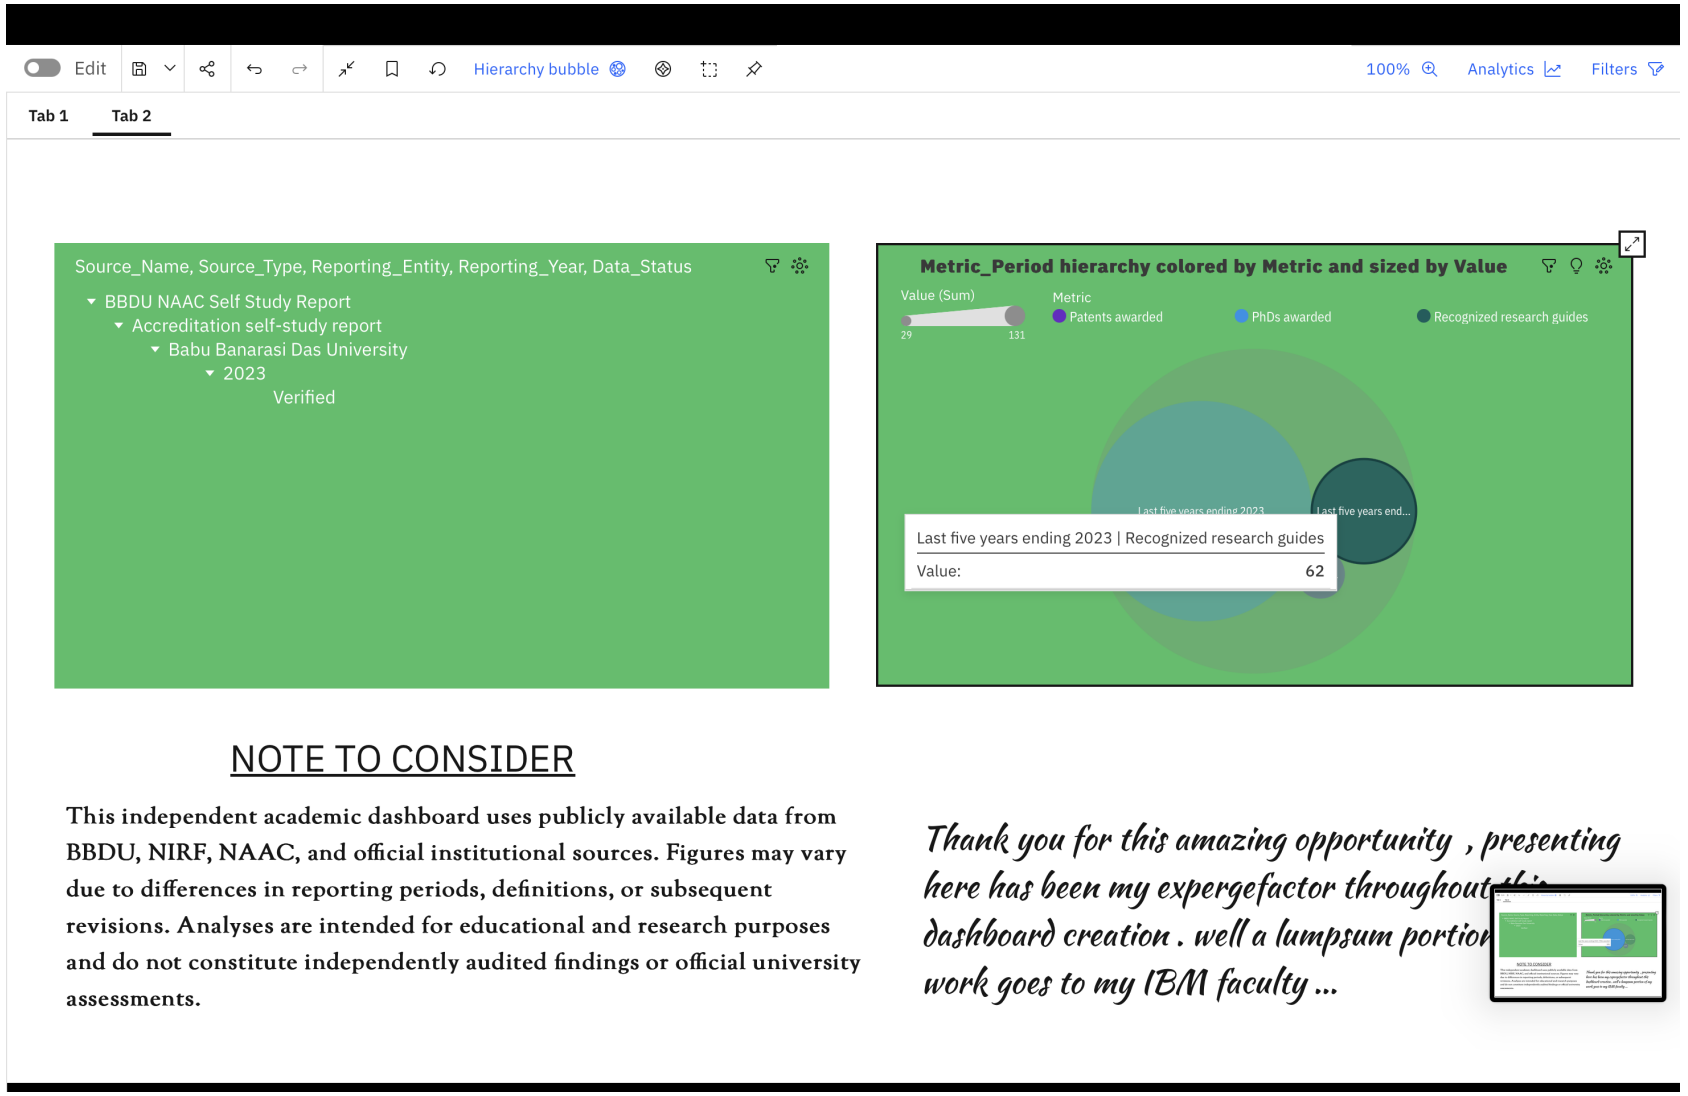

The dashboard tooltip reports 265 company visits in 2026.
Interpret it with the ongoing-year note and the placement count on the prior page.

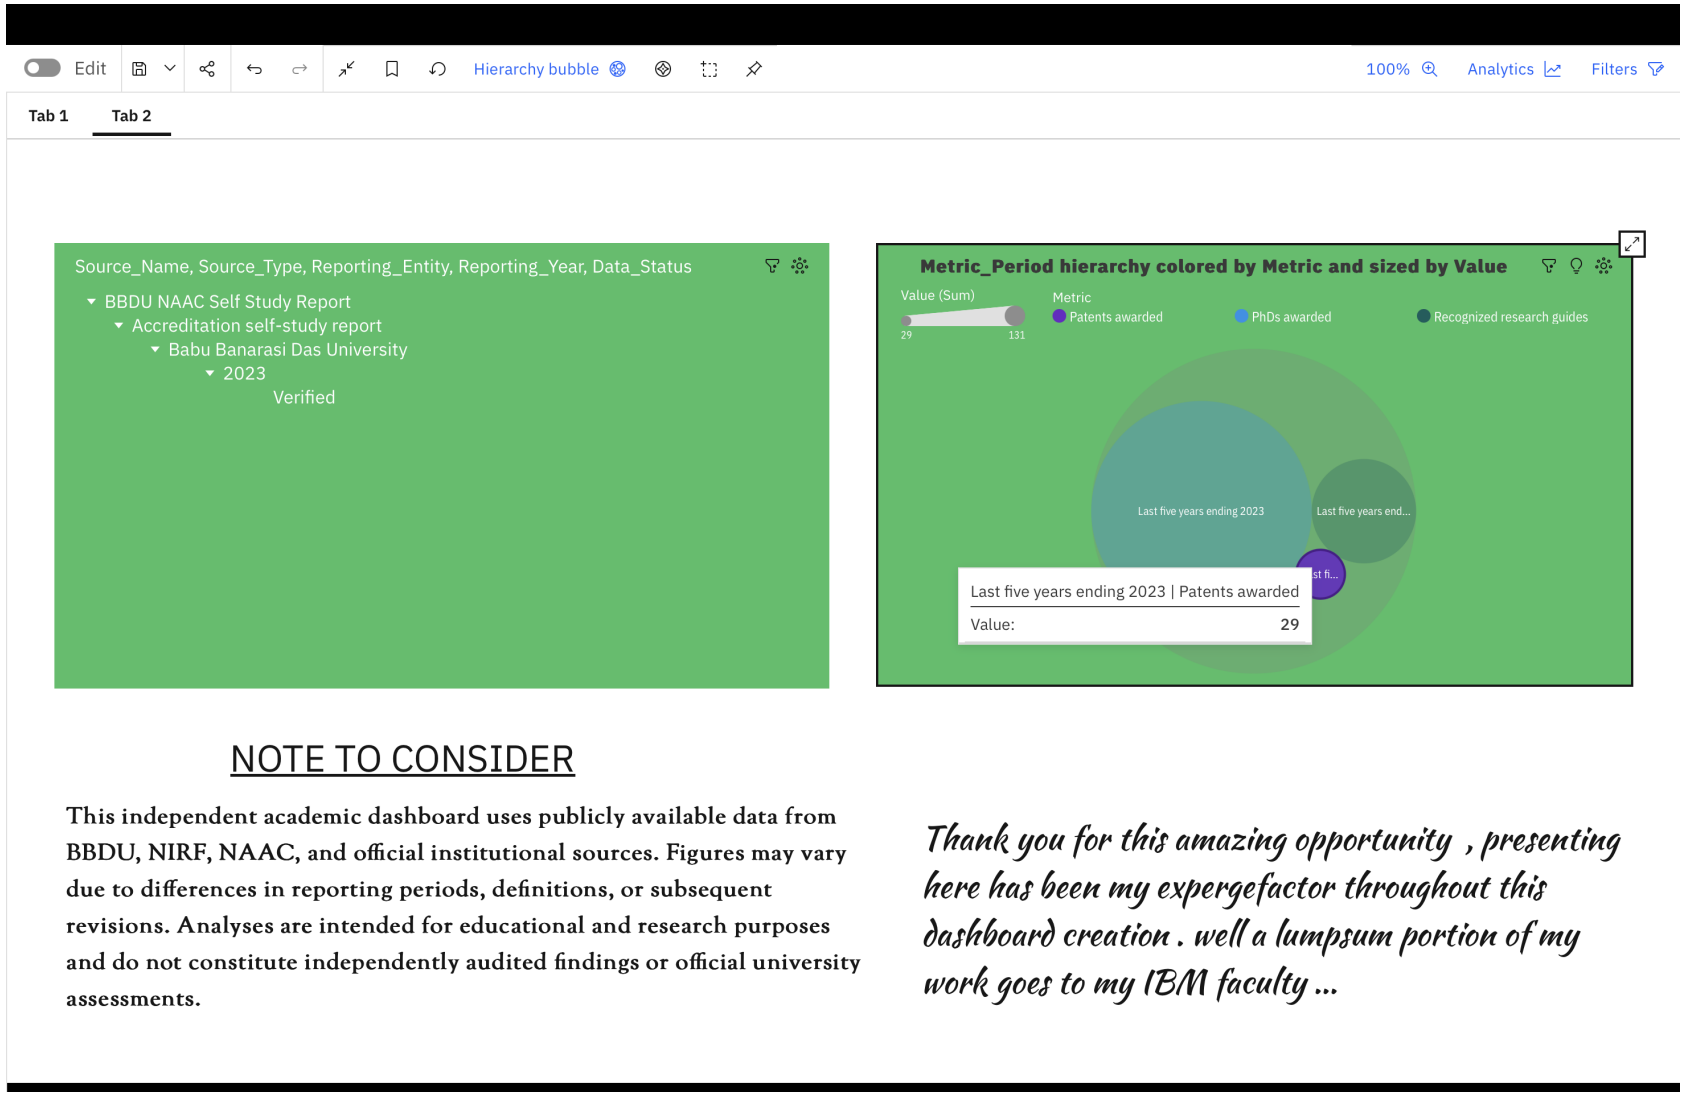

The intake chart tooltip identifies 4,760 sanctioned seats for 2023–24.
Sanctioned intake describes capacity; actual enrollment can differ.

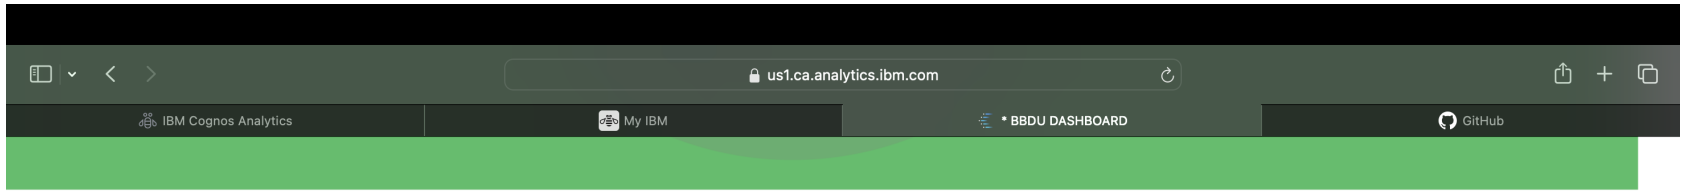

The research view groups PhD awards, recognized guides and patents by period.
These are related institutional indicators, but they do not establish a causal chain.

The five-year dashboard tooltip reports 62 recognized research guides.
Guide capacity is a context measure; it should not be read as a count of doctoral completions.

The dashboard tooltip reports 29 patents awarded over the five years ending 2023.
Annual published and granted patent counts use different periods and definitions.

Thank you for this amazing opportunity , presenting here has been my expergefactor throughout this dashboard creation . well a lumpsum portion of my work goes to my IBM faculty ...

The dashboard credits the IBM faculty for guidance during its creation.
Prepared for presentation by ADITYA.
